Screening, Brief Intervention, and Referral to Treatment

An Evidence-Based Approach

ADOLESCENTS
The following information has been adapted from the SAMHSA Core Curriculum: *Screening Patients for Substance Use in Your Practice* Setting, and slides by the National Screening, Brief Intervention & Referral to Treatment (SBIRT) Addiction Technology Transfer Center (ATTC) Network.

This project was a collaboration with the National ATTC, the Institute for Research, Education & Training in Addictions (IRETA) and the University of Pittsburgh School of Nursing.
Project Funding

This project was support in part by funds from the Center for Substance Abuse Treatment, Substance Abuse and Mental Health Services Administration (SAMHSA), Department of Health and Human Services (DHHS) under grant number 1U79TI025365, “SBIRT Training for Nurse Practitioners Across the Lifespan”. The information or content and conclusions are those of the author and should not be construed as the official position or policy of, nor should any endorsements be inferred by the Center for Substance Abuse Treatment, SAMHSA, DHHS, or the U.S. Government.

Monitoring the Future

- Long-term study of substance use and related factors in US
  - Adolescents, college students & adult high school grads
  - Conducted annually, funded by NIDA
- 2017 Results
  - Adolescent marijuana use increased in 2017
    - First significant increase in 7 years
  - Young people less concerned about dangers of prescription drugs
  - 6/10 students (62%) consumed alcohol (more than just a few sips) by the end of high school
    - Nearly a quarter (23%) have done so by 8th grade
    - Almost half of 12th graders reported being drunk at least once

(Johnston et al., 2018)
Binge drinking appears to have leveled off this year, but is significantly lower than peak years.

*Binge drinking is defined as having 5 or more drinks in a row in the last 2 weeks.

(NIDA, 2017)
DAILY MARIJUANA USE MOSTLY STEADY

2007 – 2017

8th graders 10th graders 12th graders

2017

0.8% 2.9% 5.9%

71.0% OF HIGH SCHOOL SENIORS DO NOT VIEW REGULAR MARIJUANA SMOKING AS BEING VERY HARMFUL, BUT 64.7% SAY THEY DISAPPROVE OF REGULAR MARIJUANA SMOKING.

(NIDA, 2017)
Past-year misuse of Vicodin among 12th graders has dropped dramatically in the past 15 years. Misuse of all Rx opioids among 12th graders has also dropped dramatically, despite high opioid overdose rates among adults.

Past-year use among 12th graders

Students report lowest rates since start of the survey

Across all grades, past-year use of heroin, methamphetamine, cigarettes, and synthetic cannabinoids are at their lowest by many measures.

(NIDA, 2017)
The Adolescent Brain

- The greatest changes to the parts of the brain that are responsible for impulse-control, judgment, decision-making, planning, organization and involved in other functions like emotion, occur in adolescence.
- This area of the brain (prefrontal cortex) does not reach full maturity until around age 25.
- Video [http://teenagebrain.blogspot.com/](http://teenagebrain.blogspot.com/)

(Crews & Boettiger, 2009)
Teen Brain

• http://teenbrain.drugfree.org/science/
School performance during the past 12 months among US high school students during 2003.

(Miller et al., 2007)
Negative Impact of Binge Drinking

Increased frequency of binge drinking results in increased prevalence of other health risk behaviors.

- riding with a driver who had been drinking
- being sexually active (and increased risk of alcohol-exposed pregnancy and FASD)
- smoking cigarettes or cigars
- being a victim of dating violence
- attempting suicide
- using illicit drugs

(Miller et al., 2007)
Harmful Effects to Adolescent Brain

• Regions related to decision making, judgment, impulse control, emotion and memory are not yet fully developed; teens more prone than adults to taking risks, including experimenting with tobacco, alcohol and other drugs (Crews & Boettiger, 2009).

• Addictive substances physically alter its structure and function faster and more intensely than in adults, interfering with brain development, further impairing judgment and heightening the risk of addiction (Benowitz, 2010).

• Emerging evidence of the heightened vulnerability of the developing adolescent brain to the harmful effects of AOD use (Windle et al., 2008).
Brain Development May Influence the Behavior of a Teenager

- Sensory and Physical Activities May be Favored Over Complex, Cognitive-demanding Activities
- Activities with High Excitement and Low Effort May be Preferred
- Poor Modulation or Control of Emotions (e.g. the Teenager Emotionally Over-reacts to a Minor Incident)
- Propensity Toward Risky, Impulsive Behaviors
- Poor Planning and Judgment

(Miller et al., 2007)
Effectiveness of SBIRT for Adolescents

Preliminary research shows promising effects of SBIRT on adolescent AOD use:

- **Project CHAT (D’Amico et al., 2008)**
  - Less likely to report intentions to use marijuana
  - Lower perceived prevalence of marijuana use and fewer friends who use marijuana
  - Increased readiness to change, increased self-efficacy, decreased marijuana use

- **SBIRT in 2 continuation high schools (Grenard et al., 2007)**
  - Youth willing to discuss personal drug use
  - Reported satisfaction with SBIRT
  - Greater readiness to change drug use at follow-up
Effectiveness of SBIRT for Adolescents

• Knight et al. (2005) pilot study
  – Reduction in substance use and risk of drinking after driving at three month follow-up

• Harris et al. (2012) computerized Screening and Brief Advice (SBA)
  – Lower past 90 day alcohol and drug use than control group
  – cSBA prevented or delayed initiation of alcohol use
    • 44% fewer cSBA adolescents started drinking during the twelve month study period than adolescents in the control group
Summary of the Teen SBIRT Research:

1) Small but growing literature
2) Teen outcomes:
   - AOD use
   - AOD consequences
   - Self-efficacy
2) Abstinence not typical
3) Effects are rapid and durable
4) High satisfaction ratings by teens
5) May promote additional help-seeking
Why Brief Interventions Make Sense For Youth

- Their problems are not as deep-rooted.
- Person-centered approach is appealing to young people.
- Commitment to lengthy and intensive interventions can be difficult at this age.
- Many youth are seen in opportunistic settings

(NIAAA, 2011)
Delivering SBIRT to Adolescents
Why SBIRT with adolescents?

- A large population of “subclinical” AOD users exists
- Only 1 in 20 with clinical AOD involvement get services
- Behavioral health and primary care offer “opportunistic” settings
- Expands service options
- Low threshold for service engagement
- Congruent with aspects of adolescent development

(NIAAA, 2011)
SBIRT Core Clinical Components

- **Screening**: universal screening for quickly assessing use and severity of alcohol, illicit drugs, and prescription drug abuse

- **Brief Intervention**: a brief motivational and awareness-raising intervention given to risky or problematic substance users; 1 session

- **Brief Treatment**: “Extended Brief Intervention” (EBI) is similar to BI in emphasizing motivation to change and client empowerment given to moderate to high risk users up to 5 sessions (total is 6/year)

- **Referral to Treatment**: referrals to specialty care for patients with substance use disorders

(NIAAA, 2011)
At ages 12 to 15 years:
• any drinking is considered at least “moderate” risk, and
• half of drinkers in this age group drink frequently enough to be in the “highest risk” category.

At ages 16 to 18:
• about one-third of drinkers are at “lower risk,”
• one-fifth at “moderate risk,” and
• just under half are at “highest” risk (NIAAA, 2011).
For Students who drink – Assess Risk, and Provide Feedback

For patients who **DO** drink...

For a broad indicator of your patient’s level of risk, start with the chart below, which provides empirically derived population-based estimates. Then factor in what you know about friends’ drinking and other risk factors, ask more questions as needed, and apply your clinical judgment to gauge the level of risk.

On how many DAYS in the past year did your patient drink?

- 1–5 days
- 6–11 days
- 12–23 days
- 24–51 days
- 52+ days

Highest risk

<table>

(NIAAA, 2011)
# Definitions: Standard Drink

<table>
<thead>
<tr>
<th>12 oz. of beer or cooler</th>
<th>8.9 oz. of malt liquor</th>
<th>5 oz. of table wine</th>
<th>3-4 oz. of fortified wine (such as sherry or port)</th>
<th>2-3 oz. of cordial, liqueur, or aperitif</th>
<th>1.5 oz. of brandy (a single jigger)</th>
<th>1.5 oz. of spirits (a single jigger of 80-proof gin, vodka, whiskey, etc.)</th>
</tr>
</thead>
</table>

*Note: People buy many of these drinks in containers that hold multiple standard drinks. For example, malt liquor is often sold in 16-, 22-, or 40 oz. containers that hold between two and five standard drinks, and table wine is typically sold in 25 oz (750 ml) bottles that hold five standard drinks.*
SBIRT for Youth in Healthcare Settings

• The American Academy of Pediatrics recommends that pediatricians provide alcohol screening and counseling to all adolescents (Levy & Williams, 2016).

• The Massachusetts Department of Public Health states that “Every adolescent should be asked yearly about use of alcohol and drugs” (Massachusetts Department of Public Health Bureau of Substance Abuse Services, 2009).
Relatively Few PCPs Screen According to Guidelines

- An American Academy of Pediatrics’ survey found that only 45% of fellows routinely screened young patients for alcohol use, and only 16% reported using standardized instruments (1998).
- In another study, they found that, while 14% of the sample scored ≥2 on the CRAFFT, providers’ only identified only 4.8% of the patients with problem use (Hassan et al., 2009).
- Moreover, almost 20% of those perceived by the providers to have an AOD problem still did not receive a recommendation for an intervention (Hassan, et al., 2009).
CRAFFT Screening Tool

- The CRAFFT is a validated screening tool for use with adolescent patients
- Because it screens for both alcohol and other drug problems simultaneously, it is especially handy for providers
- CRAFFT consists of
  - Part A: 3 prescreening questions and
  - Part B: 6 items
  - Scoring Algorithm
- A positive CRAFFT means the student should be assessed for alcohol/drug use severity (mild, moderate or severe)

(Knight, Sherritt, Shrier, Harris, Chang, 2002)
CRAFFT - Part A Review

Ask: During the Past 12 months, did you:

1. Drink any alcohol (more than a few sips)?
2. Smoke any marijuana or hashish?
3. Use anything else to get high? (“Anything else” includes illegal drugs, over the counter and prescription drugs, and things that you sniff or “huff”.)

If answers NO to all, Ask the CAR question in Part B, then STOP.

If answers YES to ANY, ask all of Part B

(Children’s Hospital Boston, 2009)
IF: No to All Part A and No to Car question:

*Praise and Encouragement:* “You made some good choices not to use drugs or alcohol.”

IF: No to All Part A and Yes to Car question:

“Please don’t ever ride with a driver who has had a single drink, because people can feel that it’s safe to drive even when it’s not.”

(Children’s Hospital Boston, 2009)
The CRAFFT

Part B:

1. Have you ever ridden in a CAR driven by someone (including yourself) who was “high” or had been using alcohol or drugs?

2. Do you ever use alcohol or drugs to RELAX, feel better about yourself, or fit in?

3. Do you ever use alcohol or drugs while you are by yourself, or ALONE?
The CRAFFT

4. Do you ever _FORGET_ things you did while using alcohol or drugs?
5. Do your _FAMILY_ or _FRIENDS_ ever tell you that you should cut down on your drinking or drug use?
6. Have you ever gotten into _TROUBLE_ while you were using alcohol or drugs?

(Children’s Hospital Boston, 2009)
The CRAFFT

A score of 2 or greater is a “positive” screen and indicates that the adolescent is at high-risk for having a substance use disorder.

(Children’s Hospital Boston, 2009)
CRAFFT Part B

IF: CRAFFT = 1

Brief Advice:

• “I recommend that you stop (behavior) and now is the best time. Alcohol and drugs have a detrimental affect on your growing brain and you may do some things that you could come to regret.”

• Affirm their strengths and supports.

(Children’s Hospital Boston, 2009)
CRAFFT Part B
CRAFFT ≥ 2  Brief Assessment

"Tell me about your alcohol and drug use."
"Has it caused you any problems?"
"Have you tried to quit? Why?"

- No Acute Danger or Red Flag
- Red Flags for Addictions
- Signs of Acute Danger

(Children’s Hospital Boston, 2009)
CRAFFT Part B
CRAFFT ≥ 2  Brief Assessment

“Tell me about your alcohol and drug use.
“What are the good things about your alcohol and drug use—reasons you want to use?”
“What are some of the downsides to drinking or using?
“What would you like to go from here?”

No Acute Danger or Red Flag

Red Flags for Addictions

Signs of Acute Danger

(Children’s Hospital Boston, 2009)
CRAFFT $\geq 2$:

No Acute Danger or Red Flag

BI: To stop or cut down
- Give Brief Advice and summary
- Give praise and encouragement if willing to quit.
- Plan follow-up

Red Flags - Addictions

CRAFFT $\geq 5; < 14$ years; daily or near daily use; alcohol related blackouts (memory lapses)

Use BNI
- Summarize
- Refer to treatment (5 or 6)
- Invite Parents
- Plan follow-up

(Children’s Hospital Boston, 2009)
CRAFFT ≥2:

Signs of Acute Danger: Drug-related hospital visit; use of IV drugs; combining alcohol use with benzodiazepines’ barbiturates or opiates; consuming potentially lethal volume of alcohol (14 or more drinks); driving after substance use

Use BNI

• Make an immediate intervention
• Contract for safety
• Discuss confidentiality and possibly contacting parents
• Plan follow-up

(Children’s Hospital Boston, 2009)
American Academy of Pediatrics: Research update: 45 % of fellows routinely screen for alcohol use. http://aapnews.aappublications.org/cgi/content/short/14/10/1
